PROJECTS

- “Design And Analysis of Overhead Water Tank By STAAD ProV8i”

Abstract: The main objective of this project is to build up a water tank for a selected area whose population is around 5000. The consumption of

water by each person is taken as 200 litre per capita per day. This deals with comparative study of manual and analytical design of circular overhead water tank by STAAD Pro V8i. The aim was to build up a water tank which should be economical.

- **“Surface Water Quality Assessment and Determination of Drinking Water Quality Index By Adopting Multi Criteria Decision Analysis Techniques”**

Abstract: The present investigation approximates the Water Quality Index with Analytical Hierarchy Process. It will also validate the same by comparing it with the Analytic Network Process incorporating the novel criteria like Cost, Potability, and Taste. Dissolved Oxygen has emerged as the most influential parameter in determining water quality.
